CI/CD High Level Steps

Integration

Merge changes frequently and verif through automation

- 1. Propose change and outline the issue.
- 2. Peer-review the change.
- 3. Verify the change via automated testing
- 4. Determine whether the change can be merged.

Deployment

Teams control their projects and contributors are responsible for deploying their changes

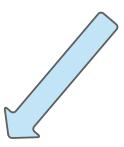

- 1. In the deployment phase, minimizing risk depends on rollout stratey.
- 2. Another contribution to risk minimization is blocking deployments that haven't passed verification

Monitoring

Monitoring phase

- 1. High-level tracing and root cause analysis.
- 2. Production Feedback
- 3. New fix/feature to add
